

Ex: ଘର ଭିତ୍ତିରେ

- ଡାହାଣ ଘର (୧୫) : ଘର ଭିତ୍ତିରେ ୪୫ kW (୩୫, ୪୧୫V)
- ଡାହାଣ ଘର (୨୫) : ଘର ଭିତ୍ତିରେ ୧୫ kW (୩୫, ୪୧୫V)
- ଘର ବ୍ୟବସାୟ (୧୫) : ୩୦ kW (୩-Phase, ୪୧୫V)
- ଘର ଭିତ୍ତିରେ ଘର (୧୫) : ୭.୫ kW (୩୫, ୪୧୫V)
- factory Lighting load : ଘର ୧୫ kW

Load calculation

$$\text{Motor (ଡାହାଣ ଘର)} = I_{FL} \Rightarrow 45 \times 1.68 \times 1.11 \times 25 \\ \Rightarrow 106A$$

Cable size: ~~50mm~~ 4x1c 50 mm² BYA cable +
1x1c 25 mm² EARTHING

$$\text{water pump} : I_{FL} \Rightarrow 15 \times 1.68 \times 1.11 \times 25 \\ \Rightarrow 34.97A$$

Cable size: 4x1c - 10 mm² BYA cable +
1x1c - 10 mm² Earthing

$$\text{Air compressor} : I_{FL} = 30 \times 1.68 \times 1.11 \times 25 \\ = 69.93A$$

Cable: 4x1c - 25 mm² + 16 mm² Earthing
Cable.

Sulconazole Nitrate Cream

PUMP: $7.5 \times 1.68 \times 1.1 \times 1.25 \Rightarrow 17.48A$ ^{$\rightarrow$ MEC}

Cable = $4 \times 1c - 4mm^2$ BYA cable + $4mm^2$ Earthing cable.

Common Load:

$15 kW \Rightarrow 15 \times 1.68 \times 1.65 \times 60\%$ ^{$\rightarrow$ BNBE}
 $\Rightarrow 24.95A$ _{$\rightarrow$ MD}

Cable = $4 \times 1c - 6mm^2$ BY A cable

Total load = $(3 \times 45) + (2 \times 15) + 30 + 7.50 + 9$
 $= 211.50 kW \rightarrow$ connected Load
 $= 211.50 \times 90\%$ _{$\rightarrow$ Diversity factor}
 $= 190.35 kW$

$I = 190.35 \times 1.68 \times 1.15 \Rightarrow 381.12A$
 $= 400A$ MEEB

Cable Size $240mm^2 + 120mm^2$ earthing

Substation Designing

Connected Load: 211.50 kW

Maximum Demand: 190.35 kW

→ 400 KVA → Transformer
→ 250 KVA → Transformer
current, Max Demand current cover

Primary Current

$$I_p = \frac{400 \times 10^3}{\sqrt{3} \times 11000} \Rightarrow 21A$$

Secondary Current

$$I_p = \frac{400 \times 10^3}{\sqrt{3} \times 415}$$

$$\text{Cable Size} = \frac{I_{sn} \times \sqrt{t}}{k} \rightarrow 35$$

$$= 556A$$

$$= 556 \times 1.2$$

$$= 667.2 \text{ MCB}$$

800 MCB

$$I_{sn} = I_p \div Z$$

$$= 21 \div 0.06$$

$$= 350 A$$

$$= 350 \div 1000$$

$$= 0.35$$

$$\text{Cable Size} = \frac{3.5 \times \sqrt{3}}{0.143}$$

$$= 42.39$$

$$\text{Cable Size} = 95 \text{ mm}^2$$

Short circuit current
almost 10 times of normal
current

$$= 0.35 \times 10 \Rightarrow 3.5 \text{ kV}$$
